

Ciem Cornelissen

PhD Researcher in Computer Science Engineering

ciemcornelissen.github.io | ciem.cornelissen@ugent.be | linkedin.com/in/ciem-cornelissen | github.com/ciemcornelissen
Google Scholar | ORCID: 0009-0003-0149-6722 | Ghent, Belgium

EDUCATION

Ghent University - imec <i>PhD in Computer Science Engineering</i>	Ghent, Belgium Jun. 2024 – Present
KU Leuven <i>Advanced Master of Artificial Intelligence – Magna Cum Laude</i>	Leuven, Belgium Sep. 2022 – Jun. 2023
Ghent University <i>Master of Science in Physics – Cum Laude</i>	Ghent, Belgium Sep. 2020 – Jun. 2022

RESEARCH EXPERIENCE

PhD Researcher <i>IDLab, Ghent University - imec</i>	Jun. 2024 – Present Ghent, Belgium
- Developed Le MuMo JEPA, extending joint-embedding predictive architectures to multi-modal perception through learnable fusion tokens and achieving the strongest performance-efficiency trade-off among from-scratch multi-modal baselines (CVPR 2026 URVIS) - Research on predictive representation learning and joint-embedding architectures for multi-modal perception, with broader interests in world models and robust sensor understanding - Developed LISA, a domain-adversarial deep learning framework for illumination-invariant multi-modal analysis, improving prediction generalization by over 20% across varying environmental conditions - Created the OHSLIC algorithm for efficient on-device sensor segmentation, achieving 10x inference speedup (12.2ms vs 130.2ms) on an NVIDIA Jetson Nano for real-time embedded perception	

PUBLICATIONS

Le MuMo JEPA: Multi-Modal Self-Supervised Representation Learning	2026
<i>IEEE/CVF Conference on Computer Vision and Pattern Recognition (CVPR) – URVIS Workshop</i> (Jun. 2026) - Self-supervised framework learning unified representations from RGB and companion modalities via learnable fusion tokens - Strongest performance-efficiency trade-off on downstream tasks among from-scratch multimodal baselines - Authors: C. Cornelissen, S. Leroux, P. Simoens Paper Code	
In-Field Mapping of Grape Yield and Quality with Illumination-Invariant Deep Learning	2025
<i>IEEE Internet of Things Journal</i> (Oct. 2025) - Developed LISA framework for illumination-invariant hyperspectral imaging in precision viticulture - Complete IoT-enabled robotic system for non-destructive, real-time mapping of grape yield and quality - Authors: C. Cornelissen, S. De Coninck, A. Willekens, S. Leroux, P. Simoens	
Adaptive Clustering for Efficient Phenotype Segmentation of UAV Hyperspectral Data	2025
<i>IEEE/CVF Winter Conference on Applications of Computer Vision (WACV) Workshops</i> (Mar. 2025) - Introduced OHSLIC algorithm for computationally efficient, real-time phenotype segmentation - Enables on-device processing on UAVs with superior accuracy and reduced inference time - Authors: C. Cornelissen, S. Leroux, P. Simoens	

TECHNICAL SKILLS

Research Interests: Self-Supervised Learning, Predictive Representations, World Models, JEPA, Multi-Modal Learning, Computer Vision
Perception: RGB/LiDAR/Thermal Fusion, Depth Estimation, Semantic Segmentation, 3D Object Detection, On-Device Inference
Programming & Tools: Python, PyTorch, C/C++, TensorFlow, Git, Docker, Linux, L^AT_EX
Languages: Dutch (Native), English (Fluent, C2 level)
